

Biological Primary Types in the Auckland Museum

No. 3. Zoological (supplement).

By A. W. B. POWELL, Assistant Director.

In this number, which brings the list of zoological types up to date, a further 312 primary types are listed. The complete list of zoological types in the Auckland Museum now totals 1,530 entries. Of this number 201 are in the Powell loan collection of mollusca, and these are indicated by an asterisk. Fossils are preceded by the symbol †. In all cases the entries are generically alphabetic under Phyla, and as originally published.

In No. 1 of this series (Powell, 1941, Rec. Auck. Inst. Mus. 2 (5) : 239-259) six holotypes were listed as missing, but one of these, *Tainuia aucklandica* Marshall, 1926, has since been located. In the present supplement two additional holotypes, published as belonging to the Auckland Museum, are not in the collections. They are *Besla rossiana* Laws, 1941, and *Levipyrgulina sulcata* Laws, 1941.
